 - Travelling

PROFILE

My name is Ibrahim Isazade, and I am a 17-year-old aspiring IT professional from Baku, Azerbaijan. My journey in technology began five years ago, ignited by a deep curiosity about how software and systems shape our world. Over the years, this interest has evolved into a passion for web development, culminating in my current role as a Full-stack back-end web developer with one year of experience.

Through dedicated learning and practice, I have explored a diverse range of web development technologies across both front-end and back-end disciplines. On the front end, I have worked with React and Next.js to create dynamic, user-friendly interfaces. On the back end, I have honed my skills using Firebase, MongoDB, and OracleDB for database management. Presently, my primary focus is on building robust and efficient websites with ASP.NET Core Web API, which has further deepened my expertise in back-end development.

EDUCATION

Front-End, Code Masters, Baku

February 2022 — August 2022

- HTML5
- CSS
- JavaScript
- SASS
- Node.js basics
- React basics
